Additional funding application database

- WHAT?** Collects information on funding applications from the University of Oulu to external funders
- WHY?** The management of the university as well as the management of the faculties and units need to know how many applications are sent, what is the value of the application stock and self-financing share in euros and what are the success rates by funder. Based on this, the amount of supplementary funding in the coming years can be estimated.
- Research support services have previously maintained an application database of already submitted applications with information from the Academy of Finland, Business Finland and the EU, but the overall picture based on only part of the funders has been insufficient.

Additional funding application database

HOW?

In the future, the information of all funding applications will be collected from the applicants themselves using a simple electronic form (MS Forms). The form is also available on mobile devices.

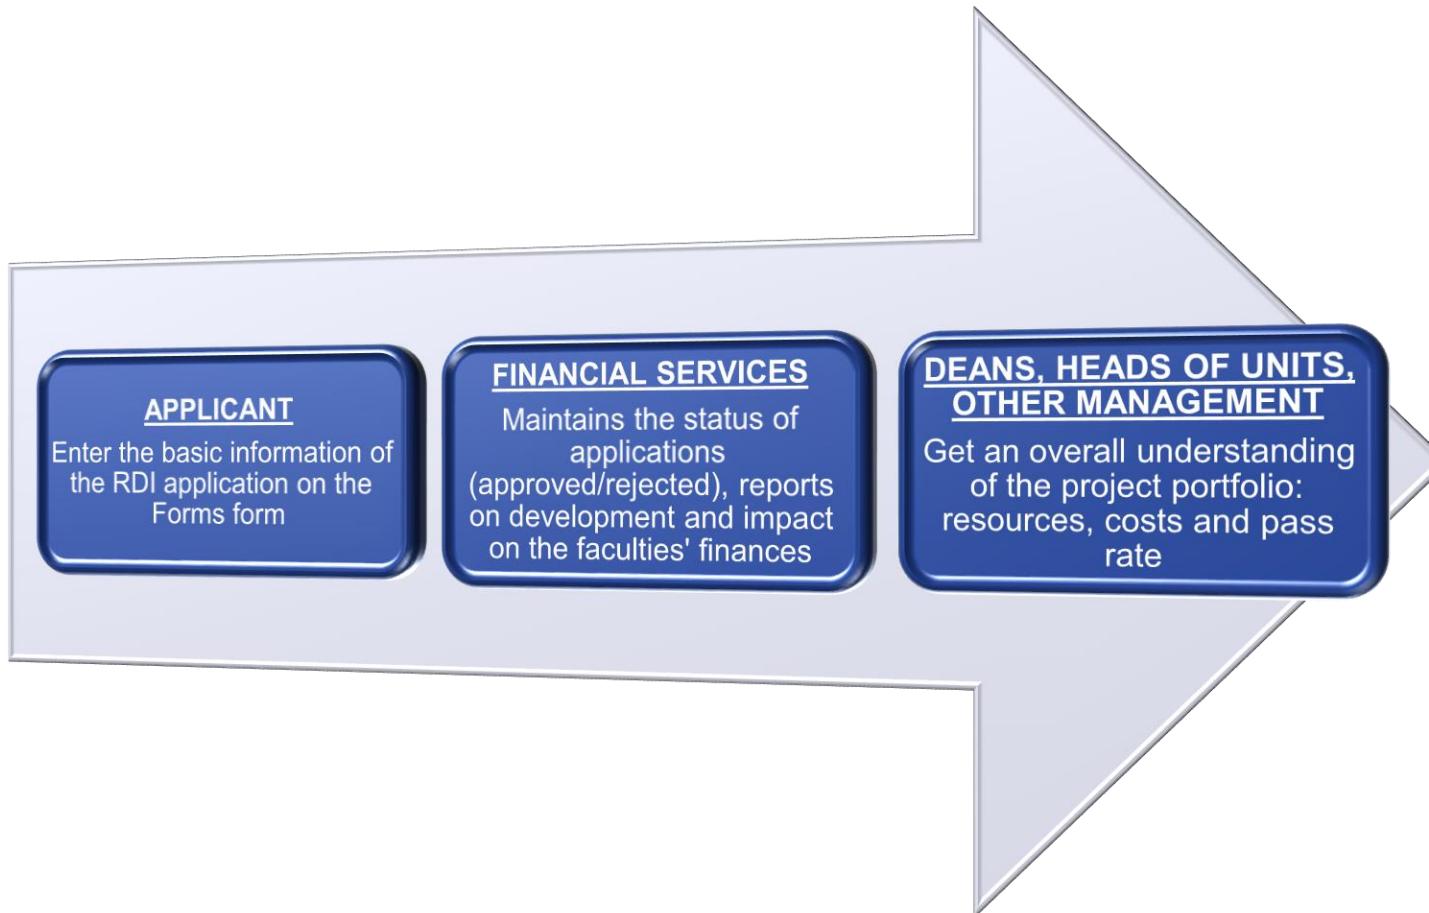

Financial Services reports the development of the application base and the impact on the finances as part of the monthly financial reporting of the faculties. The Power BI report will be available to the university's management, deans and heads of units.

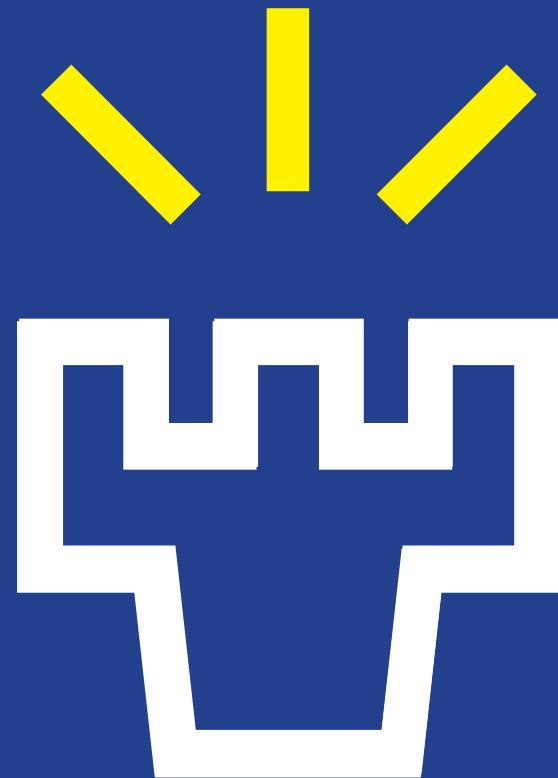

Examples of report content:

- How many applications are there and how much additional income is expected each year from those applying
- What is the application success rate by funder
- The portfolio can be searched by financier, unit and applicant
