

UNIVERSITY OF HELSINKI

A PhD student position is available at Haartman Institute, in the group of Sanna Lehtonen. The main research interest of the group is to characterize the pathophysiological mechanisms of diabetic nephropathy. The experimental research projects concentrate in studying actin cytoskeleton regulation, insulin signalling and glucose transport in kidney epithelial cells.

Please direct enquiries and applications, including CV, list of publications and names of possible reference persons, to sanna.h.lehtonen@helsinki.fi
